

# 5 Ways Augmented Reality Training Can Save Your Organization Money

What if you were told your augmented reality (AR) training program will cost **\$25,000 to \$50,000** or more? The upfront cost may be overwhelming, but the long-term benefits an AR program could bring to your organization can make the costs worth it.

AR training can save your organization money in the following **5 ways**:

## 1. Reduce repeat visits for unsolved issue

When an issue arises at an organization, whether it be mechanical or technical, AR can be utilized as an in the moment solution.

As long as an employee has a mobile device or tablet with them onsite, they have immediate access to an AR training program that has the information and resources they need to resolve issues.

## 2. Speed up the time for resolution

AR training programs speed up the time needed for resolving issues that arise in the moment. AR overlays resources onto real-life items to create a custom training experience that allows for quick access to videos and other immersive materials.

A quick resolution time saves money in the long run because the earlier a problem is fixed, the better and less costly it is.

## 3. Reduce the need for reliance on experts for answers

With AR training, SMEs' expertise is collected and embedded in the program itself through informational text boxes and videos, reducing the need for in-person training and repeated sessions.

## 4. Create a more consistent training experience

AR creates a more consistent training experience, which comes with a variety of benefits that can help your organization save money, including:

- ◆ Increases employee retention
- ◆ Improves performance and confidence levels
- ◆ Decreases employee turnover

## 5. Reduce potential safety incidents

A major benefit to AR training is that it creates a safe experiential learning environment. With AR, learners avoid potential safety hazards and risks associated with operating large, expensive machinery.
